

Leca® Uno was specified as part of a cottage renovation project in Cambridgeshire, where the aim was to create a lightweight screed floor compatible with traditional building fabric.

Older properties often require flooring systems that manage moisture effectively while avoiding excessive structural load. In this project, Leca® Uno provided a practical solution that aligns with the requirements of heritage construction and sympathetic renovation.

Lightweight Properties was a key factor in the specification.

For this cottage renovation, Leca® Uno was chosen primarily for helping to ensure the new floor works in harmony with the existing masonry and traditional construction methods.

FACTS

Amount of material: 64 × 25 L bags [Leca® Uno](#)

Interesting Fact: For this cottage renovation, Leca® Uno was chosen primarily for helping to ensure the new floor works in harmony with the existing masonry and traditional construction methods.

Delivery Method: 25L Bags/ Curtain Sided Vehicle
